Department of Obstetrics  
and Gynecology

# Simulation Program

## Simulation Team:

Kristen Burhans, MD  
Stephanie Havens, RN  
Kyan Lynch, MD  
Jennifer Truax, RN

## Methods Used:

Standardized  
Patients

Interdisciplinary  
Mock Codes

Procedural  
Training

Mock Oral  
Boards

Teaching to  
Teach

Practice Managing  
Emergency Situations

## Sample Topics Covered in Simulations:

- Postpartum hemorrhage
- Placing cerclage
- Informing patient of a diagnosis with a poor prognosis for fetus
- Preparing equipment, patient, surgical field, and OR team for a laparoscopic case
- Managing a difficult ethical situation in an emergency (patient declining blood transfusion due to religious reasons)
- Measles outbreak
- Laparoscopic olympics

## Comments from Evaluations:

*"Great to get so much hands-on practice!"*

*"This was an excellent session that really took advantage of multiple learning modalities."*

*"Surgical sim was a useful thought exercise"*

*"Uterine manipulator training was incredibly helpful"*

## Future Directions:

- Increase number of multidisciplinary simulation events
- Continue to expand use of high fidelity simulations to create realistic practice conditions
- Broaden the diversity of procedures and scenarios covered in simulation
- Continue to explore social determinants of health and compassionate care through simulation
- Collect, analyze, and publish quantitative and qualitative data on success of simulation curriculum
- Offer opportunities for learners to become engaged in simulation planning process
